

### Changing Batteries:

1) Remove 4 screws from the back of the housing 2) Make sure that the batteries is inserted with the positive (+) terminal facing up 3) After replacing the batteries, make sure housing is properly secured. The batteries should be replaced every year or as needed with your transmitting unit: To replace the batteries in your transmitter you will need two 3-volt Lithium batteries (CR2025 or equivalent). Carefully remove the screws on the transmitter case and separate the transmitter housing. Remove the old batteries from the battery clip and place the new batteries under the clip with the positive ends of both batteries facing up.

XP-2-300  
Transmitter sensor  
strip should be tested at least  
once per week.

This Quick Reference Guide provides directions for FAST START installation and setup of your innovative protection system. It also serves as a handy reference.

## Components

## Quick Overview.

The XP-300 transmitter, when used in a care caller system, is designed to assist the caregiver in monitoring patient activity. When setup the patient will trigger the alarm by adding or removing pressure on sensor pad, depending on application and setting of toggle switch. The XP-300 transmitter is water resistant which is selectable to monitor chair, bed, floor and rail/bed sensor applications. The transmitter has long-lasting lithium batteries that will not need frequent replacement. When activated the transmitter will send a signal to an enunciator and the alarm sounds and the strobe flashes.

XP-300 Transmitter is Long Life battery operated and is pre-connected to Sensor Pads. When sensor is activated by weight of patient [getting ON (N/O setting) or OFF (N/C setting) sensor pad], the transmitter sends the signal to the Enunciator. N/C-OFF-N/O switch allows caretaker to attend patient's needs. The XP-300 transmitter is selectable for Normally Closed (N/C) weight of patient getting off sensor pad or Normally Open (N/O) weight of patient getting on sensor pad operation, allowing patient to move around in chair or bed without sending alarm until tripped!

The XP-300 Transmitter has a switch to turn the transmitter off to allow the caregiver to work with a patient and not have the alarm sound.

## XP Series Built In Transmitter

Lifetime Sensor Pads

Emergency Caller Products (T) 800-227-2474 (F) 800-762-7613
